SPATIAL DATA LOGIC

Online Plan Review

Connected Government. Connected Citizens.

How We Simplify Plan Reviews

Why SDL

Spatial Data Logic's Municipal Management Software helps bridge the gap between municipalities and their constituents by providing visibility across departments, streamlining workflow for staff and enabling self-service access for residents.

Online Plan Review streamlines and digitizes the plan review process. Approvers can view plans digitally, collaborate between departments, track progress and detect changes with ease.

GO PAPERLESS

Plans can be submitted, reviewed, approved and sealed digitally. Supplemental documents such as reports and certificates can be submitted along with plans

EASY NAVIGATION

PDF plans are preprocessed resulting in exceptionally fast load times (even on mobile devices) and allowing users to zoom, navigate and toggle between versions without lag

CHECK APPROVAL STATUS

A dashboard provides oversight into which subcode officials have reviewed the plans and whether the plans have passed, failed or are currently under review

DEPARTMENT COLLABORATION

Approvers can add markups, assign tasks, view changes and leave messages for other reviewers

TRACK CHANGES

Change detection feature proactively identifies changes between versions

STREAMLINE WORKFLOW

Checklist and task features ensure all required actions are taken and approvals remain on track

ICC PARTNERSHIP

ICC premier members will be able to access and select from a live data set of codes
