SDL DRIVES EFFICIENCY IN NEW JERSEY MUNICIPALITIES BOTH SMALL & LARGE

Stratford is a 1.59 square mile town in the state of New Jersey with just over 7,000 residents. With some town hall employees handling multiple departments & responsibilities, having a municipal software that makes their processes easier and more efficient is extremely important.

After determining that their Construction software was too slow & outdated to meet their needs, the Land Use department reached out to surrounding towns for vendor recommendations. They ultimately selected Spatial Data Logic's software to streamline workflows and save time for both in-house staff and field employees.

HOW SDL HELPS STRATFORD

- **Digital Record Keeping:** All applications, permits & records are stored digitally, allowing staff to quickly locate information.
- **No Manual Fee Entries & Calculations:** Stratford's fee schedules were imported into SDL's software. This allows staff to select from a menu of fees vs. manually entering and calculating the fees.
- **SDL Mobile:** Inspectors can access permits, inspection requests & property information remotely from a smartphone or tablet. Additionally, they can conduct inspections using SDL Mobile and the information will sync back to the other SDL Platforms.
