SOFTWARE

SPATIAL DATA LOGIC

Streamline OPRA Requests

Connected Government. Connected Citizens.

Why SDL

Spatial Data Logic (SDL) helps bridge the gap between municipalities and their constituents by providing visibility across departments, streamlining workflow for staff and enabling self-service access for residents.

Our municipal management software helps Clerks process, assign and complete OPRA requests within the designated timeframe. Clerks can easily search for information by property to provide quick answers to residents pressing questions.

How We Help With OPRA

PAPERLESS

No need to dig through paperwork or rely on other departments to locate data. SDL modules work together to provide a comprehensive view of property history allowing you to search for the answers you need by property or department

KNOW WHERE YOUR REQUEST STANDS

Track the status, department assignment, location and closure time for each request

EMPOWER RESIDENTS

Reduce foot traffic and call times for your department. Regulate what data is open to the public. Encourage residents to submit requests and search for information online via SDL's online portal or citizen app

COLLABORATION

Assign tasks, send reminders and chat with the necessary departments for each OPRA request

GIS MAPPING

Our GIS maps allow information and documents such as permits, violations and licenses to be linked to a specific parcel. These maps are a quick reference tool when responding to residents
